SUMMARY

Full-Stack Engineer with almost 3 years of experience, specializing in scalable Node.js backend systems while delivering end-to-end features across web and mobile applications. Strong in SQL optimization, real-time communication, secure APIs, and cloud deployments using AWS and Google Cloud.

EDUCATION

R V College of Engineering

Master of Computer Applications, CGPA: 8.58

Bengaluru, Karnataka

Feb. 2022 – Aug 2023

Global Institute of Management Sciences

Bachelor of Computer Applications, CGPA: 8.05

Bengaluru, Karnataka

Jun. 2018 – Sep 2021

EXPERIENCE

EdTech Platform – Backend Performance Optimization | Node.js, PHP, MySQL

Dec 2023 – May 2024

- Analyzed performance bottlenecks in a legacy PHP-based backend with complex SQL queries and request-processing flows.
- Optimized critical backend paths, reducing API response times from approximately 3 minutes to under 5 seconds.
- Designed and implemented high-performance stored procedures, cutting heavy query execution time from around 40 seconds to 1 second.
- Migrated core backend modules from PHP to Node.js, improving maintainability and async request handling.
- Enabled scalable data fetching and filtering to reliably support thousands of student records post-migration.

University Mentoring Platform | React, Node.js, MySQL, Sequelize, WebSockets

June 2024 – Jan 2025

- Built a multi-university system to track student records, conduct online examinations, and store scores, logbooks, EPA and assessments.
- Delivered a mentoring module with appointment timeslots, live chat via WebSockets, and detailed student performance visualization (GPA, GPAX, semester marks).
- Designed a singleton-based backend DB connection to support multiple university databases through a master DB.
- Configured admin-side mentoring settings including phases, academic years, and mentor-to-student assignments.
- Built an admin dashboard to display student progress across multiple aspects such as Logbook, EPA Progress, Longitudinal Pool, and Excellence metrics.

YachtHub – Internet Access Orchestration | Node.js, PostgreSQL, Redis, Google Cloud

Aug 2024 – Jan 2025

- Designed a transactional system for internet pack bookings across harbours, handling berth-level availability, per-day operational events, and partial cancellations.
- Modeled marina operations including berth assignment and VLAN mapping, with Redis caching to optimize availability and pricing lookups.
- Implemented secure invoice and document delivery using Google Cloud Storage with signed URLs and CDN-backed access, alongside role-based admin workflows.

PROJECTS

LLM-Powered Git Diff Summarizer | FastAPI, React, Python, Gemini 2.5 Flash, Docker

July 2025 – Present

- Built a local-first tool to compare Git branches and generate per-file change summaries using an LLM.
- Implemented a FastAPI backend to compute Git diffs and extract file-level code changes.
- Added rule-based code analysis to flag coding standard violations with explanatory feedback.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, SQL, Python, Java

Backend & Frontend: Node.js, Express.js, React.js, React Native, FastAPI, Flask

Databases & Cache: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: AWS (EC2, Lightsail), Google Cloud, Docker, Nginx

Tools & Libraries: Git, GitHub, GitLab, WebSockets, Tailwind CSS, Redux, Zustand, LLMs (Gemini, Phi-3)
